## Interactive Online Learning

## LearnersCoach Course Builder

Before you create a course, you need to have a few things ready. Like, you need to have already registered on our site [learnerscoach](http://learnerscoach.co.ke). To create a course from backend you need to browse to Dashboard > Tutor LMS > Courses > Add New.

In the backend course creation system, a complete course page looks like the following

The screenshot displays the 'Add New Course' interface in the LearnersCoach backend. On the left is a dark sidebar menu with options: Dashboard, Tutor LMS, Courses, Categories, Tags, Students, Instructors, Q & A, Quiz Attempts, Add-ons, Status, Settings, Posts, Media, Pages, Comments, Appearance, Plugins, Users, Tools, Settings, and Collapse menu. The main content area is titled 'Add New Course' and contains a form for creating a new course. The course title is 'Programming Foundations with JavaScript, HTML and CSS'. Below the title is a permalink field with the URL 'http://10.0.1.52/themesum/tutor-alpha/course/programming-foundations-with-javascript-html-and-css/'. The form includes a rich text editor with a toolbar containing options like Paragraph, Bold, Italic, Text, Visual, and Text. The editor contains two paragraphs of text. The right sidebar contains a 'Publish' section with buttons for 'Save Draft', 'Preview', 'Status: Draft', 'Visibility: Public', and 'Publish on: Mar 6, 2019 @ 08:42'. Below this is a 'Categories' section with a list of categories: Computer Science, Art & Music, Engineering, Media, and Science. The 'Skills' section has a text input field and an 'Add' button. The 'Featured Image' section is at the bottom.

Paragraph B I Text Tutor ShortCode

Do you realize that the only functionality of a web application that the user directly interacts with is through the web page? Implement it poorly and, to the user, the server-side becomes irrelevant! Today's user expects a lot out of the web page: it has to load fast, expose the desired service, and be comfortable to view on all devices: from a desktop computers to tablets and mobile phones.

Learn foundational programming concepts (e.g., functions, for loops, conditional statements) and how to solve problems like a programmer. In addition, learn basic web development as you build web pages using HTML, CSS, JavaScript. By the end of the course, will create a web page where others can upload their images and apply image filters that you create.

In this course, we will learn the basic tools that every web page coder needs to know. We will start from the ground up by learning how to implement modern web pages with HTML and CSS. We will then advance to learning how to code our pages such that its components rearrange and resize themselves automatically based on the size of the user's screen.

### The Basics of Course Creation

You'll find it very easy to create a course with LearnersCoach. All the task can be done in one place. There's this Course Builder section which will take care of creating topics, lessons, quizzes, assignments, and questions. Mostly everything that is accessible to a student once they enroll in a course.

The rest of the sections control the data that will be put on the Course overview page. First thing first, lets set up the Course overview page

- **Course Title:** This is where you type in the name of the course. Try to keep it brief and precise.
- **Description:** Your complete course description goes to the Description field. Here you highlight why the course should be taken and who is the appropriate audience for the course.
- **Choose Categories:** For a better understanding and easier navigation, it's better to assign the course to a category. Note: Only the admin can create a course category.
- **Course Price:** you can define if your course will be free or you are going to charge for the course from here. If you choose to charge for the course. Put the price in the text field. If your monetization is WooCommerce then a new product will be automatically created and assigned to the course. But if you're using the backend editor. You'll need to assign a WooCommerce product manually.
- **Level:** This is the general categorization of all the courses. Defining a difficulty level here would provide a better user experience.
- **Course Thumbnail:** It's basically the banner image for the course. It will appear either as the course thumbnail or as the banner image in the respective pages.

### Introduction Video

This section lets you add and control the settings of the introduction video which typically appears on the course overview page.

# LEARNERS COACH

### ▼ Video

Course Intro Video

HTML5 (mp4)

Select the video type and place video value below.

Upload Your Video

File Format: .mp4

Upload Video

**Video Poster**

Thumb Size: 700x430 pixels. File Support: jpg, jpeg, or png

Upload Image

### Course Upload Tips

- Set the Course Price option or make it free.
- Standard size for course thumbnail is 700x430.
- Video section controls the course overview video.
- Course Builder is where you create & organize a course.
- Add Topics in the Course Builder section to create lessons, quizzes, and assignments.
- Prerequisites refers to the fundamental courses to complete before taking this particular course.
- Information from the Additional Data section shows up on the course single page.
- Make Announcements to notify any important notes to all enrolled students at once.

**Course Intro Video:** You can select the introduction video from three sources: HTML5, YouTube, Vimeo, and External URL. Choosing HTML5 will let you upload mp4 video on your site.

**Video Poster:** You can upload a custom poster (thumbnail) for the video using this functionality.

## Additional Data

This section controls the little yet important details about a course. All the data given here will be shown on the course overview page

Benefits of this course (What I will learn)

Create a static homepage useful for most websites, or a blog like homepage useful for bloggers.  
Create an affiliate site for passive, recurring income  
Create a Responsive Website that looks good on any browser.

Requirements/Instructions

No prior knowledge of Wordpress is required as everything will be covered in this course.  
You will need a working computer and a web browser connected to the internet..  
You don't need any coding experience at all. That is the beauty of Wordpress.

Targeted Audience

If you want to learn Wordpress without paying for a web host, this course is perfect. I'll show you how you can install Wordpress on your very own computer while you learn.  
This course is for you if you want to build a website, whether for personal or business

Material Includes

7.5 hours on-demand video  
10 articles  
31 downloadable resources

### Course Upload Tips

- Set the Course Price option or make it free.
- Standard size for course thumbnail is 700x430.
- Video section controls the course overview video.
- Course Builder is where you create & organize a course.
- Add Topics in the Course Builder section to create lessons, quizzes, and assignments.
- Prerequisites refers to the fundamental courses to complete before taking this particular course.
- Information from the Additional Data section shows up on the course single page.
- Make Announcements to notify any important notes to all enrolled students at once.

**Total Course Duration:** It is the ideal duration of how long it will normally take to finish the course.

**Benefits of this course:** You should put some oneliners here on how the course can benefit the ones who take it.

**Requirements/Instructions:** You should put some oneliners to help better understand what are the requirements for this course.

**Targeted Audience:** You should put a few one-line sentences on who are the people that can be most benefited from this course.

**Materials include:** These are one-liners too. You can write down what are the materials you'd be providing on this course.

### Making Announcements

The announcements are like the notice boards. All students in the course will see the announcement when you make one. You can take advantage of the available variable {user\_display\_name} to make it more personalized, like the one shown in the screenshot. Doing so will enable each individual to see their own name on the announcement. Hit the “Add Announcement” button to publish it.

#### ▼ Announcements

### Course Attachments

The Course Attachments add-on lets you upload attachments to a course. Any file format that is supported by Learners Coach can be uploaded. To enable this feature, turn on

“Tutor Course Attachments” add-on from Dashboard > Tutor LMS > Addons > Tutor Course Attachments.

Enabling the Course Attachments add-on will allow you to upload attachments across the platform. An example is shown below –

▼ Course Attachments

When you're on the Questions tab, you'll see an "Add Question" button, clicking on it will present you with the above screen. The options are pretty self-explanatory, you need to type in the question, set its mark, add a description if needed, then choose the answer type and click on "Add An Option" to add your answer. Be sure to define the correct answer from the list.

# LEARNERS COACH

## Interactive Online Learning

### Question Types in Tutor

To bring diversity in a quiz and make it more interactive, Learners Coach offers 10 question types.

1. **True False:** It's like the typical true or false question type, you can define whether the answer is true or false.
2. **Single Choice:** It's more like the MCQ type, here multiple answers are given for the question but only one is correct.
3. **Multiple Choice:** When your question might have more than one possible answer, use this question type.
4. **Open-Ended/Essay:** This question type best fits when you need to take feedback from the students.
5. **Short Answer:** It's more like the same as open-ended type, the difference is here the character limit is 200 ideally.
6. **Fill in the Gaps:** As the name suggests, students need to type in a word or two in the blank field. You need to define the correct response while creating the question. Type in "{dash}" in the question title (you can use it more than once in a question) to create the dash and in the answer field, type in the correct response. Use "|" to differentiate your answers if you have more than one.
7. **Matching:** This question type comes in handy when you need to set up word matching questions. You need to type in the matching word or phrase alongside the answer and you're all set. You can also set up image as well as word to this matching type. Like the following

Question Title	Gap Answer
<input type="text" value="The {dash} is 2 {dash} long."/>	<input type="text" value="movie   hours"/>
<small>Please make sure that {dash} variable contains in your question title to show dash. You can use multiple variable</small>	<small>Separate multiple answer by pipe ( ), 1 answer per variable assigned in question</small>
<input type="button" value="Save Answer"/>	

8. **Image Matching:** As the name suggests, this question type allows you to create image matching questions. You need to upload an image along with its word or phrase answer to setup this question.
9. **Image Answering:** Unlike image matching type question, here a student needs to write down the answer by observing the image. The answer is defined by the instructor (in small letter).
10. **Ordering:** This question type is suitable to create re-arranging type question. It's the best fit for taking quiz regarding precedence, step verification or pipeline.

# LEARNERS COACH

## Interactive Online Learning

### Quiz Settings

Now that we've created questions for our quiz, we need to know the settings to set up the quiz the way we want to. Browse to the Settings tab.

**Quiz**

Quiz Info Questions **Settings** Advanced Options

**Time Limit**

25 Minutes

☐ Hide quiz time - display

Time limit for this quiz. 0 means no time limit.

**Attempts Allowed (Optional)**

0

Restriction on the number of attempts a student is allowed to take for this quiz. 0 for no limit

**Passing Grade**

70 %

Set the passing percentage for this quiz

**Max questions allowed to answer**

10

This amount of question will be available for students to answer, and question will comes randomly from all available questions belongs with a quiz, if this amount greater then available question, then all questions will be available for a student to answer.

Back Save Save & Exit

**Time Limit:** You can determine the quiz duration using this function. You can even hide the quiz time if needed. In case you don't want to put a time limitation, then set the limit to 0.

**Attempts Allowed:** If you want a fixed number of attempts to be allowed for taking the quiz, then you can set it from here. For instance: if you set the limit to 5, that means a student can attempt to take the quiz for 5 times at best.

# LEARNERS COACH

## Interactive Online Learning

**Passing Grade:** As the name suggests, a student has to obtain this mark in order to pass the quiz. For instance: 70% means they need to score 70 out of 100 to pass the quiz.

**Max Questions Allowed To Answer:** It's a bit tricky. This feature is introduced to randomize questions in a quiz. The purpose of this function would be more clear with an example. Say you have 50 questions in a quiz, if you put 50 here, a student will have to answer all the 50 questions in order to complete the quiz. But if you put 10 here, the student will have to answer only 10 questions out of the 50 and these 10 questions will appear randomly. No student will get the same set of questions.

### Quiz Advanced Options

There are a few additional settings to give you access to more advanced options.

Quiz

Quiz Info Questions Settings **Advanced Options**

**Quiz Auto Start** ☐ If you enable this option, the quiz will start automatically after the page is loaded.

**Question Layout** Question below each other

**Hide question number** ☒ Show/hide question number during attempt.

**Short answer characters limit** 200 Student will place answer in short answer question type within this characters limit.

Back Save Save & Exit

**Quiz Auto Start:** Enabling this feature will make the quiz to start automatically when a student enters to the quiz page.

**Question Layout:** You can control how the questions will appear in the quiz using this function.

**Hide Question Number:** Turning it on will put a serial number in front of every question.

**Short Answer Characters Limit:** You can define the character limit for the “Short Answer” question type from here.
